

Chris Kernaghan

Frontend Software Developer

Self-motivated, conscientious with a particular eye for detail, I am determined to make my way in the field of Software Development. Having worked for the past 8 years as a Lecturer, I want to turn my passion for Software Development into a career. My passion for coding is evident by the intensive self-study I have completed while working full-time. Lecturing has provided me with excellent communication, problem solving, project management and organisational skills; a skill set extremely transferable to the field of Software Development. This role has also provided me with the opportunities to work collaboratively on projects with many local and national organisations such as RSPB and Ulster Wildlife.
